# Selecting Stainless Steel for Optimum Performance

Sponsor: International Molybdenum Association (IMOA)

#### Today's Goal

Learn why some stainless steel applications look fantastic after 80 years while others look bad after 6 months

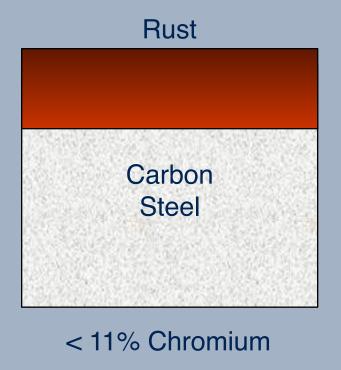

## **Achieve Long Term Success**

- Evaluate the environment
- Select the right finish and design
- Specify the right stainless steel

#### **How Does A Stainless Steel Work?**

Stainless steel is iron plus at least 11% chromium. If enough chromium is added, a protective passive film will form.

## **Major Alloying Elements**

- Iron (Fe)
- Chromium (Cr)
  - Improves corrosion resistance
- Molybdenum (Mo)
  - Improves resistance to pitting and crevice corrosion caused by salt (chlorides) and pollution
- Nickel (Ni)
  - Improves ductility, toughness, and weldability
- Nitrogen (N)
  - Improves strength and pitting and crevice corrosion resistance

#### **Families of Stainless Steels**

- Austenitic
  - 300-series numbers (304, 316)
  - Strengthened by cold work
  - Nonmagnetic
- Ferritic
- 400-series (430, 447)
- Magnetic
- Duplex
- Austenitic/ferritic (2205)
- More corrosion resistant
- Higher strength
- Magnetic

#### Low Carbon or "L" Grades

- "L" refers to low carbon levels
  - Examples: 304L and 316L
- Specify "low carbon" for welding
- When there is no price premium for low carbon stainless steel, make it your standard specification

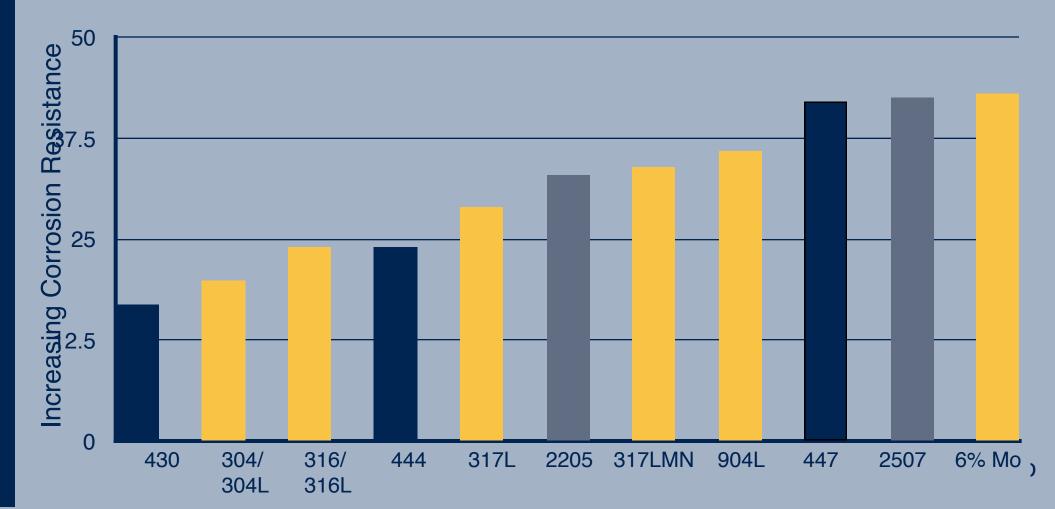

#### **Architectural Stainless Steels**

(Nominal Chemical Composition, Wt. Pct.)

	Cr	Ni	Мо	N	C, max
430	17			0.03	0.12
304	18	9		0.06	0.08
316	17	11	2	0.06	0.08
2205	22	5	3	0.15	0.03

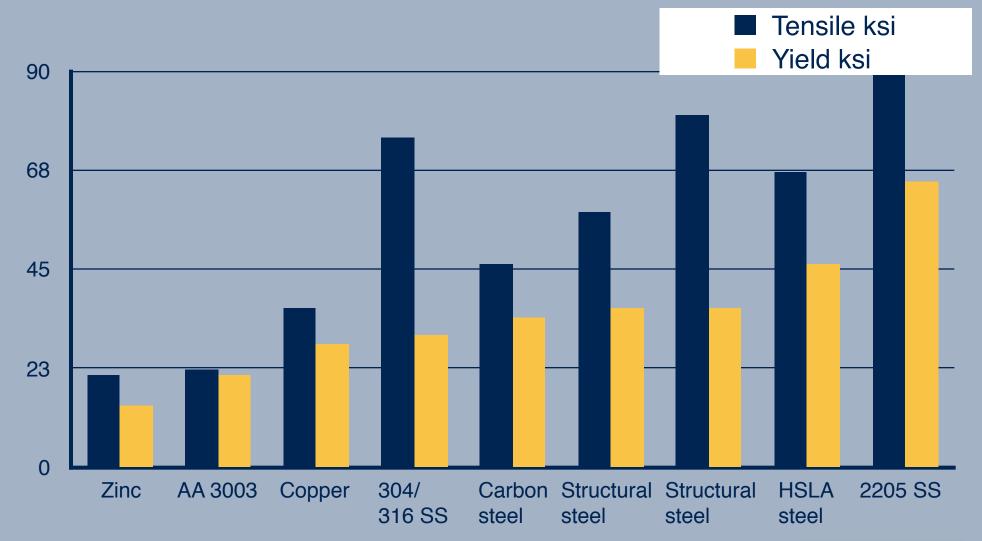

#### **Index of Relative Pitting Corrosion Resistance**

8

## Strength Comparison

#### ın

# Annual Cost of Metallic Corrosion (US\$ billions)

#### Total US Cost

- Direct cost = \$296
- Indirect cost = \$255.4
- Total cost = \$551.4

#### Construction\*

- Direct cost = \$50
- Indirect cost = \$63.6
- Total cost = \$113.6
- Avoidable = 20 to 25%
- May be underestimated.
   Does not include infrastructure and industrial construction

### Two Piers, Progreso, Mexico

- Functioning pier
  - Built about 60 years ago (1937-1941)
  - Stainless rebar
- Non-functioning pier
  - · Built about 30 years ago
  - · Carbon steel rebar

## Kure Beach, 58 years Anodized aluminum, 250 m (800 ft) from the ocean

#### **Select Type 304**

- Rural/suburban
- Urban areas
  - Low and moderate corrosivity
- Not suitable for salt exposure or moderate to high industrial pollution unless:
  - Smooth finish
  - Regular cleaning
  - · Some staining between cleanings is acceptable

Gateway Arch, St. Louis, USA

### **Select Type 316**

- Urban areas
  - Moderate and high corrosivity
- Industrial
  - Low and moderate corrosivity
- Marine and deicing salt
  - Low to moderate corrosivity

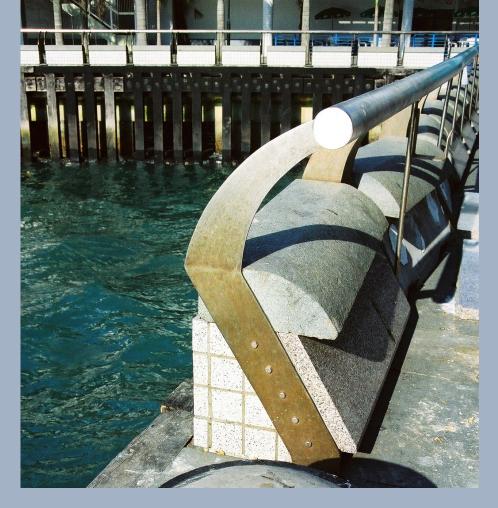

Frederick R. Weissman Art Museum

## Select More Corrosion Resistant Stainless Steels

- Industrial pollution
  - Developing countries
  - High sulfur dioxides levels
  - High particulate levels

Type 316 railings
Hong Kong Convention Center seawater spray exposure, rough finish

#### Site and Design Evaluation System

- Designed for applications where corrosion staining is not acceptable
- Do not use this system if
  - Appearance does not matter
  - Structural integrity is the primary concern

### **Environmental Pollution**

Points	Section 1: Environment (Select the highest applicable score)
	Rural
0	Very low or no pollution
	Urban Pollution (Light industry, automotive exhaust)
0	Low
2	Moderate
3	High *
	Industrial Pollution (Aggressive gases, iron oxides, chemicals, etc.)
3	Low or moderate
4	High *

<sup>\*</sup> Potentially a highly corrosive location. Have a stainless steel corrosion expert evaluate the site.

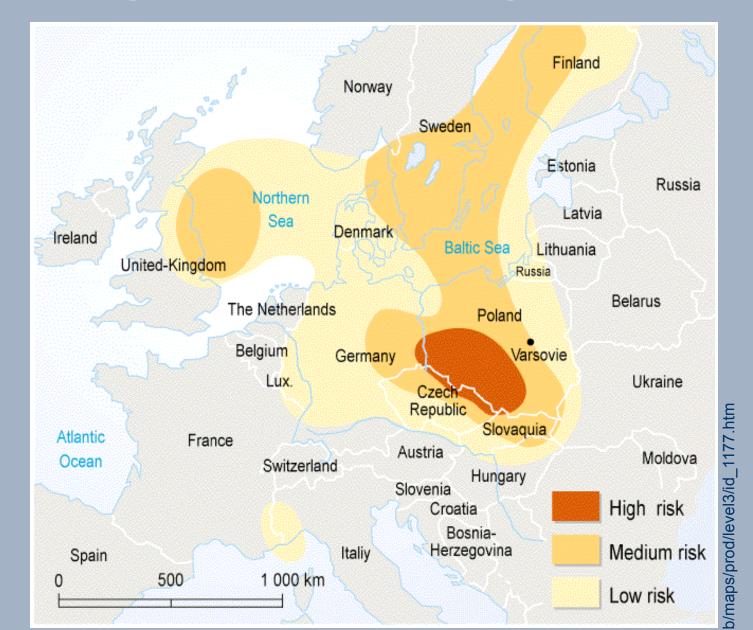

## **Rating Pollution Levels**

City	Pollution Level	Suspended Particulate µgm/m³	Sulfur Dioxide
Beijing	High	377	90
Calcutta	High	375	49
Stockholm	Low	9	5
Pittsburgh	Moderate	40	16
Moscow	High	100	109
New York	Moderate	27	26
Rio de Janeiro	High	139	129
Chicago	Moderate	35	14

#### **Coastal or Deicing Salt Exposure**

Points	Section 2: Coastal Exposure (Select the highest applicable score) If there is exposure to both coastal and deicing salt, obtain assistance from a stainless steel corrosion expert			
	Coastal or Marine Salt Exposure			
1	Low (> 1.6 to 16 km (1 to 10 miles) from salt water) **			
3	Moderate (30 m to 1.6 km (100 ft to 1 mile) from salt water)			
4	High (< 30 m (100 ft) from salt water)			
5	Marine (Some salt spray or occasional splashing) *			
8	Severe Marine (Continuous splashing) *			
10	Severe Marine (Continuous immersion) *			

<sup>\*</sup> Potentially a highly corrosive location.

Have a stainless steel corrosion expert evaluate the site.

<sup>\*\*</sup>A sample from the site should be tested to determine if chlorides are present. Some locations of this type are exposed to chlorides but others are not.

Points	Section 2: Deicing Salt (Chloride) Exposure (Select the highest applicable score). If there is exposure to both coastal and deicing salt, obtain assistance from a stainless steel corrosion expert				
	Deicing Salt Exposure (Distance from road or ground)				
0	No salt was detected on a sample from the site and no change in exposure conditions is expected.				
0	Traffic levels on nearby roads are too low to generate road mist or wind levels are too low to carry chlorides to the site, and no deicing salt is used on sidewalks.				
1	Very low salt exposure (≥180 m (600 ft) or 12 floors from salt source) **				
2	Low salt exposure (30 to 180 m (100 to 600 ft) or up to 12 floors from salt source) **				
3	Moderate salt exposure (< 30 m (100 ft) or 3 floors from salt source) **				
4	High salt exposure (Direct application or splash zone) *				

<sup>\*</sup> Potentially a highly corrosive location.

Have a stainless steel corrosion expert evaluate the site.

<sup>\*\*</sup>A sample from the site should be tested to determine if chlorides are present. Some locations of this type are exposed to chlorides but others are not.

#### **Local Weather Patterns**

Points	Section 3: Local Weather Pattern (Select only one)		
-1	Temperate or cold climates, regular heavy rain		
-1	Hot or cold climates with typical humidity below 50%		
0	Temperate or cold climate, occasional heavy rain		
0	Tropical or subtropical, wet, regular or seasonal very heavy rain		
1	Temperate climate, infrequent rain, humidity above 50%		
1	Regular very light rain or frequent fog		
2	Hot, humidity above 50%, very low or no rainfall ***		

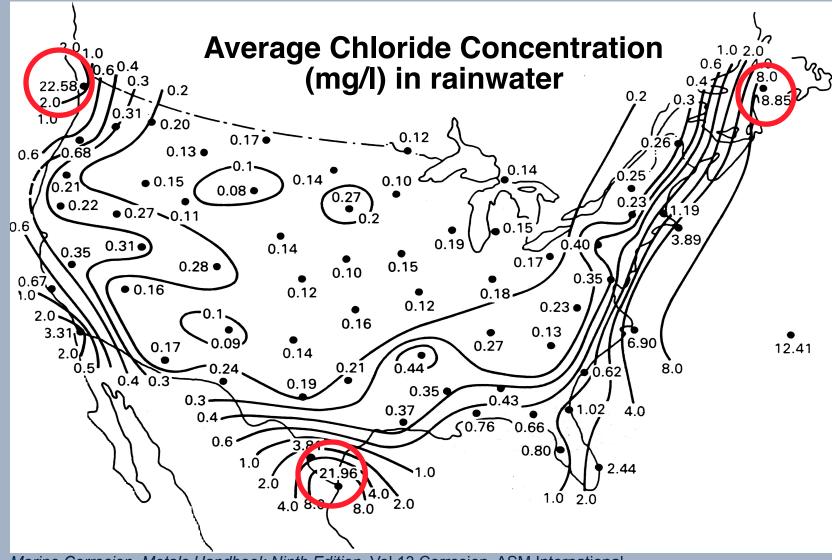

## Critical Temperature/Humidity Combinations for Salt (Chloride) Corrosion

Critical	Critical Humidity Level, %		
Temperature °C (°F)	Sodium Chloride	Calcium Chloride	Magnesium Chloride
25 (77)	76	30	50
10 (50)	76	41	50
0 (32)		45	50

# **Design Considerations**

Points	Section 4: Design Considerations (Select all that apply)
0	Boldly exposed for easy rain cleaning
0	Vertical surfaces with a vertical or no finish grain
-2	Surface finish is pickled, electropolished, or roughness $\leq R_a 0.3 \mu m$ (12 $\mu$ in)
-1	Surface finish roughness $R_a$ 0.3 $\mu$ m (12 $\mu$ in) $<$ X $\le$ $R_a$ 0.5 $\mu$ m (20 $\mu$ in)
1	Surface finish roughness $R_a$ 0.5 $\mu$ m (20 $\mu$ in) $<$ X $\le$ $R_a$ 1 $\mu$ m (40 $\mu$ in)
2	Surface finish roughness > $R_a$ 1 $\mu$ m (40 $\mu$ in)
1	Sheltered location or unsealed crevices***
1	Horizontal surfaces
1	Horizontal finish grain orientation

\*\*\* If there is also salt or pollution exposure, have a stainless steel corrosion expert evaluate the site.

## 70

# Type 316 railings beside a beach

Specifying the surface roughness is as important as selecting the right stainless steel.

# No. 4 Finish Aluminum Oxide

 $R_a 0.7 \mu m (28 \mu in)$ 

# No. 4 Finish Silicon Carbide

 $> R_a 0.3 \mu m (12 \mu in)$ 

# **Typical Sheet Surface Roughness Range**

Finish	2D	2B	ВА	No. 3	No. 4	Hair- line	No. 7	No. 8	Super No. 8
$R_a \mu$ in	5 - 39	2.4 - 20	0.5 - 4	10 - 43	7 - 25	5.5 - 8.0	2.4 - 8	0.8 - 4	0.4 - 0.8
R <sub>a</sub> µm			0.01 - 0.10				0.06 - 0.2		0.01 - 0.02

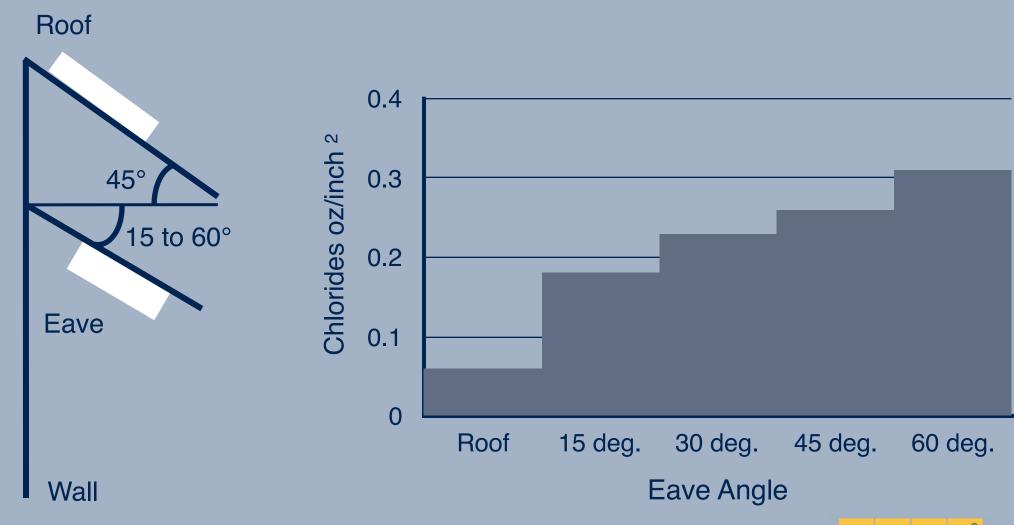

## **Tighten Specifications**

- Flatness
  - Require stretcher or tension leveling
- Chemistry
  - Sulfur ≤ 0.005 for exterior and swimming pool applications
- Iron Contamination
  - Require iron free certification in compliance with ASTM A 380
- Exterior and Swimming Pool Finishes
  - Surface roughness  $\leq R_a$  12  $\mu$ m (20  $\mu$ in)

## **Chloride Accumulation In Sheltered Locations**

74

# Photos courtesy of JSSA and ASSDA

## Sheltered Components Increased corrosion risk

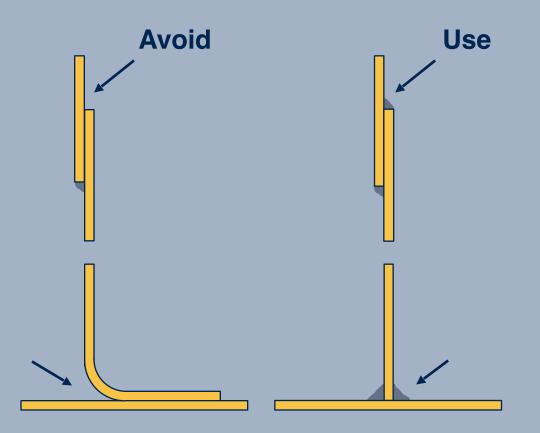

## **Sites for Crevice Corrosion**

If the design will be exposed to salt (chlorides) and moisture, avoid crevices or seal them to prevent corrosion

## 77

## **Type 316 Light Fixture**

- Highly polished light fixture
- Unsealed crevices accumulated salt and water causing corrosion
- Eliminate corrosion by cleaning the fixture and sealing the crevices

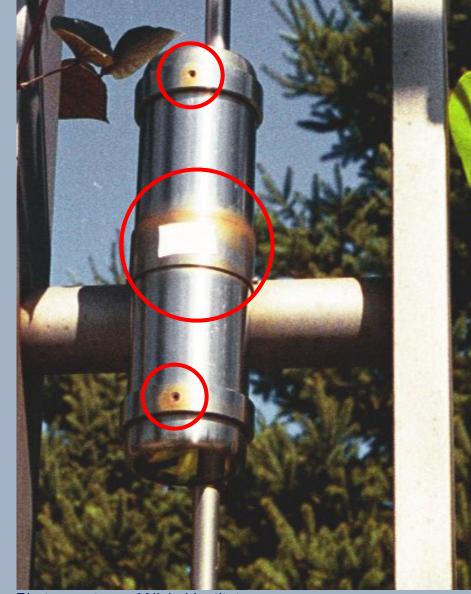

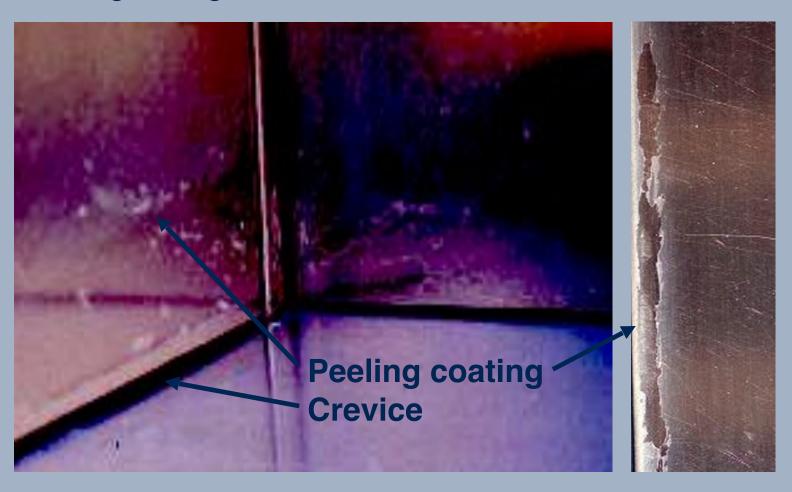

Photo courtesy of Nickel Institute

- · Coatings are not necessary, require regular replacement, and can cause corrosion
- Using the right stainless steel is more cost effective

Photos courtesy of Nickel Institute

## **Galvanic Corrosion Requires...**

- Dissimilar metals
- Electrical connection between metals (i.e., metal-to-metal contact)
- Moisture is present and connects the metals

## Solution

- Prevent direct metal to metal contact
  - Inert washers
  - Paint

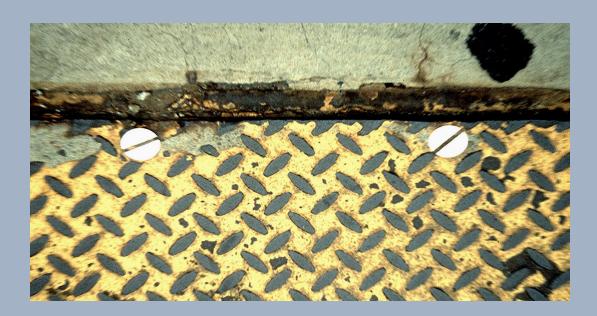

## Galvanic Series Metals and Alloys in Sea Water

Magnesium Zinc **Aluminum Alloys** Mild Steel Low Alloy Steel Cast Iron Muntz Metal **Yellow Brass Red Brass** copper **Aluminum Bronze** Silver Stainless Steel Monel Gold

Anodic More Likely to corrode

More Noble Cathodic

- Stainless steel fasteners in carbon steel cover
- Good ratio = no impact on corrosion rate
- Galvanized fasteners in stainless steel
- Bad ratio = rapid corrosion

## **How Can I Reduce the Score?**

- Design for rain washing
- Select smooth surface finishes
- Use vertical finish grain orientation
- Eliminate sheltered areas and horizontal surfaces
- Eliminate or seal crevices
- Design to facilitate manual washing
- Use natural or artificial barriers to reduce deicing salt road mist exposure

## **Standard Cleaning**

- Rain
- Hot water power wash
- Mild chloride-free detergent
- Degreaser
  - 5% ammonia and water (window cleaners)
  - Alcohol
  - Vinegar and water
  - Citrus cleaner
- 200 mesh or finer calcium carbonate abrasive (except on colored or mirror-like finishes)

150 East 42nd Street, New York City Cleaned for the first time after 30 years of service

103

# Photos courtesy of IKM and Nickel Institute

## **Reusing Stainless Steel**

525 William Penn Place Pittsburgh, Pennsylvania Completed in 1952

- Stainless entrance/lobby
- Lobby renovation in 2002
- Most of the stainless steel was refinished and reused

After

## **Remedial Cleaning**

- Adhesives
  - · Alcohol, citric cleaner or other solvent recommended by adhesive supplier
- Paint and marker pens
  - Solvents or chemical paint remover and soft brush
- Cement or mortar
  - Rinse off with water while still wet
  - If it has dried, use power washing and if necessary abrasives

## oto courtesy of Nickel Institute

## **Embedded Iron Corrosion**

- Remove by
  - Mechanical cleaning
  - Chemical cleaning ("Passivation")
- Confirm cleaning by test to
  - ASTM A 967, Chemical Passivation Treatments for Stainless Steel Parts

## otos courtesv of Nickel Institute

## **Muriatic Acid Corrosion**

- Tile, stone, masonry or concrete are sometimes cleaned with Muriatic (hydrochloric) acid
- Muriatic acid is very corrosive to stainless steel!
- Avoid Muriatic acid containing cleaners
- Use citric acid or other noncorrosive cleaners

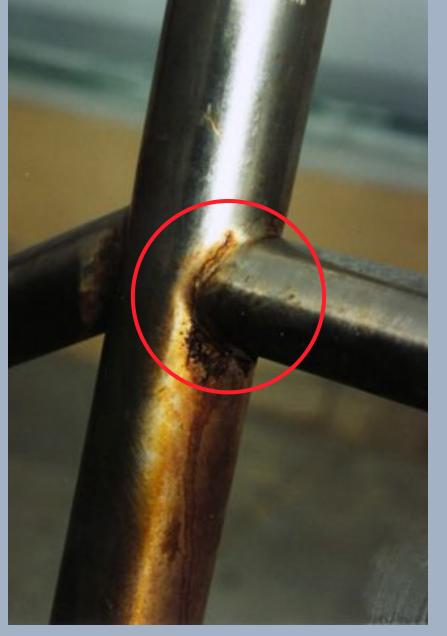

## Photo courtesy of ASSDA

## Removing Welding Heat Tint

- Mechanical methods
  - Grinding
  - Abrasive blasting
- Chemical methods
  - Pickle paste
  - Pickling

## Conclusions

- Carefully evaluate each site and application
- If technical questions arise, contact (insert appropriate organization name)
- In more corrosive environments, have a metallurgical engineer with architecture experience evaluate the site and applications
